WASHINGTON COLLEGE.

WASHINGTON COLLEGE had its origin in a classical school established before the war of American Independence, by the early settlers of the Valley of Virginia.

During the period of its infancy, it was sustained by the munificence of its founders, who secured for it in 1782 its present charter, the school bearing the name of LIBERTY HALL ACADEMY until 1798, when it was styled WASHINGTON ACADEMY, in honor of its great benefactor, and subsequently WASHINGTON COLLEGE.

The Virginia Legislature, attesting their appreciation of the unexampled merits of GEORGE WASHINGTON, in October 1784 passed an act vesting in him one hundred shares in the James River Navigation Company, which he declined, except on condition that the Legislature would permit him to transfer the donation to some object of a public nature. In compliance with the wishes of Gen. WASHINGTON, the Legislature substituted for the act of Oct. 1784, an act of Oct. 1785, providing that this fund be conveyed to him to be applied as he might indicate. Gen. WASHINGTON determined to appropriate this gift of Virginia to the endowment of an institution of learning upon the upper waters of James river, and accordingly, by his will, conveyed it to LIBERTY HALL ACADEMY. This munificent endowment now yields to the College the interest upon \$50,000 annually.

Subsequently the CINCINNATI SOCIETY, an organization composed of Revolutionary Officers and having for its object the relief of indigent persons of this class, after accomplishing the purposes for which they organized, determined to convey the funds in their treasury to some public institution, and influenced, as they avowed, by the example of Gen. WASHINGTON, bestowed the gift upon WASHINGTON COLLEGE. From this donation the College now enjoys an endowment of \$23,000.

In 1826, JOHN ROBINSON, of Rockbridge County, Virginia, a revolutionary soldier, bequeathed to the same object his estate,

which yielded about \$40,000, and enabled the Trustees to increase very materially the philosophical apparatus and the buildings of the College. In acknowledgment of this generous bequest the "*Robinson Professorship of Physical Science*" was established.

Thus thrice endowed so liberally by revolutionary heroes, WASHINGTON COLLEGE became a seat of learning to which were attracted many young men of Virginia and other States, whose influence became conspicuous in the pulpit, the forum, and the halls of legislation—among whom may be named the ALEXANDERS, the STUARTS, the MCDOWELLS, the PRESTONS, and many others that fill an enviable place in the history of our country.

In the Spring of 1861, the College was enjoying a full share of public patronage, but its regular exercises were interrupted, and for a time suspended altogether. The students, animated by the spirit that moved the young men of the South generally, organized themselves into a military company, joined the immortal JACKSON at Winchester, and for four years shared the fortunes of the STONEWALL BRIGADE, winning from their illustrious commander the designation of "*more than brave young men.*" Many of them do not survive to witness the present prosperity of their Alma Mater.

In the month of June, 1864, Gen. DAVID HUNTER occupied the town of Lexington, and under his eyes the College that bore the name and enjoyed the munificence of GEORGE WASHINGTON, was sacked; its chemical and philosophical apparatus destroyed; and its libraries, to a great extent, ruined.

The Board of Trustees, at a meeting held in the summer of 1865, took steps to repair these desolations, in which they have been, to a gratifying extent, successful; and in order to establish the Institution on a firmer footing than it ever before held, upon the acceptance of the Presidency by General R. E. LEE, they resolved to expand the sphere of its operations, and, by an enlarged scientific course, to give it a place among the first institutions of the land, thus responding emphatically to the material wants of the country.

In accordance with this resolution, they established five new Professorships—three of applied sciences, one of Modern Languages, and one of History and Literature—which were to be

filled as soon as the requisite funds could be secured. Efforts were at once put forth to enlarge the endowment of the College, which have been so far successful as to enable the Trustees to fill the chairs of Applied Mathematics and of Natural Philosophy, and the chairs of Modern Languages and English, and of History and English Literature. The duties of the third Scientific Professorship (Practical Chemistry), are discharged for the present by the professors of the other Scientific Schools, and this arrangement will continue in force until this chair is filled.

While the authorities of this venerable Institution make grateful acknowledgments to its friends in Maryland, Virginia, Kentucky, Tennessee, Louisiana, Texas, and New York City, for their generous efforts in behalf of the endowment, they feel under peculiar obligations to three philanthropic gentlemen for the following liberal donations:

Mr. C. H. McCORMICK, a Virginian, born and reared in the vicinity of Washington College and now a wealthy citizen of New York, bestowed the generous gift of \$15,000, by which the Trustees have been enabled to establish the "*McCormick Professorship of Experimental Philosophy and Practical Mechanics.*"

The late Mr. WARREN NEWCOMB, of New York City, made the liberal donation of \$10,000, and thus rendered essential aid in filling other chairs.

Mr. RATHMELL WILSON, of Philadelphia, desiring to repair the damage done the College Library, donated a large number of rare and valuable books belonging to the library of his brother, the late THOMAS B. WILSON, whose name is conspicuously associated with the Academy of Natural Sciences, and the Entomological Society of Philadelphia.

These munificent donations have put it in the power of the Board of Trustees to organize a full literary and scientific course; and they are encouraged to believe that WASHINGTON COLLEGE as a seat of learning, both in the mechanic arts and in the higher walks of literature and science, is second to no Institution in the South.

BOARD OF TRUSTEES.

REGULAR COURSE.

SCHOOL OF LATIN.

Professor HARRIS.

Ass't Professor GRADY.

INSTRUCTORS—*Messrs. FULLER, MOORE, and HUMPHREYS.*

In this School there are three classes :

I. JUNIOR CLASS.

To secure admission into this class, the applicant must be familiar with the declensions and conjugations, and have such acquaintance with syntax as will enable him to construe correctly the easiest authors. To insure such attainment, he should have mastered one of the elementary exercise books, and have read Cæsar, Sallust, Ovid, or their equivalents.

The text-books used in this class are Arnold's Prose Composition, Zumpt's Grammar, Cæsar, Nepos, (Arnold's), Cicero de Senectute and de Amicitia, Cicero's Orations. The Latin read in this class is minutely analysed, and the student is required to reproduce the various constructions in imitative exercise, both oral and written. To insure correct translation into current English, written translations at the blackboard are required.

II. INTERMEDIATE CLASS.

The authors read in this class are Livy, Cicero, and Tacitus. Daily exercises, oral and written (blackboard), and weekly written exercises in translation, both from English into Latin and from Latin into English. Zumpt's Grammar is studied systematically. Reference is made, in the study of forms, to Harrison, &c.

III. SENIOR CLASS.

In this class are read Horace, Virgil, Terence, Juvenal; and Persius. Exercises in Latin Composition continued. The study of the Roman Literature is pursued in this class throughout the session.

Roman History is taught in the School of History and English Literature.

SCHOOL OF GREEK.

Professor *WHITE*.

Ass't Professor *PRESTON*.

In this school there are three classes, *Junior*, *Intermediate*, and *Senior*.

I. JUNIOR CLASS.

This class read Xenophon's *Anabasis* and *Memorabilia*, and are instructed in the principles and structure of the language, as exemplified by regular exercises in Greek Composition. Kühner's *Grammar* is used as a manual.

II. INTERMEDIATE CLASS.

The authors read in this class are Demosthenes, Plato, and Sophocles, with reference to the Grammars of Kühner, Matthiæ, &c. Exercises in Greek Composition are written regularly, which consist of selections from the best authors, translated by the Professor and furnished to the class to be rendered into the original. These exercises are criticised and returned to the class, accompanied by explanations of the principles of the language involved.

III. SENIOR CLASS.

The authors read are Thucydides, Æschylus, Aristophanes, and Homer, with reference to the grammatical authors named above. Exercises in Greek Composition, similar to those required in the Intermediate Class, but of a higher grade, are written in this class.

The History of Greek Literature is taught by lectures. Greek History is taught in the School of History and English Literature. Candidates for graduation in Greek are expected to read extensively, in addition to what is read in the lecture-room, such authors as the Professor may indicate, and to make regular use of some standard Grammar, Kühner or Matthiæ.

SCHOOL OF MODERN LANGUAGES AND ENGLISH.

Professor JOYNES.

Ass't Professor MASSIE.

INSTRUCTOR IN ENGLISH—*Mr. R. S. THOMPSON.*

X*

DEPARTMENT OF MODERN LANGUAGES.

The languages embraced in this department are the French, the German, the Spanish, and the Italian. In French there are two classes, Junior and Senior; in each of the other languages, one class. The instruction in each language begins with the first elements, and comprehends a full course of Grammar, by text-books and explanatory lectures; the translation of progressive selections from the best models of the literature; and frequent exercises in written composition. In the Senior French Class are read selections from the more difficult authors; the Grammar is thoroughly reviewed; exercises in written composition are continued, and, as far as practicable, the *elements of conversation* are taught. For admission into this Class, the student must be able to translate the easier prose authors, and to construe simple sentences correctly into French.

The Modern Languages being studied chiefly for practical ends, the method of instruction in this department is simple and practical, yet thorough, having in view the requirements of a correct discipline, together with the largest possible attainments in the languages themselves.

TEXT-BOOKS:

FRENCH.

JUNIOR CLASS.—Ledru's French Grammar and Readers.

SENIOR CLASS.—French Grammar by Professor Schele de Vere, University of Virginia. Selections from standard Literature, Prose and Poetry.

GERMAN.

Woodbury's Shorter Course, Adler's German Reader, Tiarks' Grammar, Selections from standard Literature.

Text-books in the other languages will be made known when required.

II.

DEPARTMENT OF ENGLISH.

In this department are taught, first, the Grammar and practical use, and second, the History and Comparative Philology, of the English Language. The elementary knowledge of the language being presumed, the method of instruction is more distinctly critical than in the other languages of this School.

There are three classes, *Junior*, *Intermediate*, and *Senior*.

1. In the *Junior Class* is taught the practical Grammar, with constant exercises in writing and reading the language.

2. In the *Intermediate Class*, the Grammar is reviewed critically, with special reference also to the doctrines of GENERAL GRAMMAR, as comprehending the general principles of language, and to the comparison of related idioms, particularly the Latin, Greek, French, and German, by which the characteristics of the English language are exhibited and explained. Practical exercises are continued. This course is considered an important aid to the more advanced study of the Classics, or of the Modern Languages.

3. In the *Senior Class* are taught the Comparative Philology and the History of the language. Exercises are continued. Special instruction will also be given in Anglo Saxon and Old English, as opportunity shall permit.

Text-books will be made known hereafter.

Trench's Study of Words, and English Past and Present; Schele de Vere's Studies in English; Latham's Hand-Book; Alford's Queen's English, and Moon's Dean's English; and the Hand-Books of Craik and Angus, are used for reference in the more advanced classes.

Worcester's Dictionary is made the standard in Orthography and Pronunciation.

In this School, for the degree of BACHELOR OF SCIENCE, are required the entire Course in French, and the Junior Course in English; for the degree of BACHELOR OF ARTS, the Intermediate Course in English; for the degree of MASTER OF ARTS, the entire Course in English and in French, and one additional Modern Language.

SCHOOL OF MORAL PHILOSOPHY.

Professor KIRKPATRICK.

This School embraces Mental Philosophy; Logic and Rhetoric; Ethics, or Moral Philosophy proper; and the Evidences of Christianity.

The instruction is partly by the use of text-books, and partly by lectures.

The principal text-books are Hamilton's *Metaphysics*, as compiled by Professor Bowen of Harvard University; Bowen's *Logic*, comprising the Aristotelic and Hamiltonian Analyses of Logical Forms; Whateley's *Rhetoric*; Alexander's *Outlines of Moral Science*, with an introductory and a supplementary series of lectures by the Professor; Butler's *Analogy*, in connection with Bishop Wilson's *Synopsis and Supplement*; Paley's *Evidences of Christianity*.

In addition to the text-books, students, and especially those offering for the Degree of M.A., will be required to read, in *Metaphysics*, Reid's *Intellectual Powers*, with Hamilton's *Notes and Dissertations*, Stewart's *Elements*, Cousin's *Criticism of Locke*, McCosh's *Intuitions of the Mind*; and in *Ethics*, Jouffroy's *Introduction*, Butler's *Sermons on Human Nature*, Thornwell's *Discourses on Truth*.

Essays on the subjects embraced in this School, and written analyses of discussions pursued by the authors or in the lectures, will be required, from time to time, throughout the course.

SCHOOL OF HISTORY AND ENGLISH LITERATURE.

Professor JOHNSTON.

The School of History and English Literature, as at present constituted, embraces the subjects of Ancient and Modern History, Political Economy, Belles-Lettres and Criticism, and the History and Study of English Literature. Systematic instruction is also given in the art of English Composition; and in Declamation and Elocution.

It is desirable that students taking this School should have previously nearly completed the prescribed English Course and should at least have read elementary histories of Greece, Rome, England, and America.

The mode of instruction is by rigid examination of the student on the text, which is illustrated in a running commentary; and by lectures on the topics most important to the young men of America. In Composition and Elocution, the instruction is practical and continuous. From the Senior Class original orations are required on prescribed topics. In the Senior year the study of History is philosophical, and that of Literature, critical.

A course, more extensive and critical, is open to resident graduates.

SCHOOL OF MATHEMATICS.

Professor NELSON.

Ass't Professor ESTILL.

INSTRUCTORS—*Messrs. DOD and EATON.*

In this School there are three classes:

I. JUNIOR CLASS.

In this class are taught the Theory of numbers, Algebra and Geometry. (Six recitations per week.)

In order that students may enter this class, they must be familiar with Arithmetic, and have some acquaintance with the fundamental principles of Algebra and Geometry.

II. INTERMEDIATE CLASS.

This class studies Plane and Spherical Trigonometry, and Analytical Geometry. (Three recitations per week.)

III. SENIOR CLASS.

This class studies the Differential and Integral Calculus, the Calculus of Variations, and the Philosophy of Mathematics. (Three recitations per week.)

In all the classes, the students are subjected to rigid examinations in the class-room, and are carefully trained in making accurate demonstrations at the black-board. Much importance is attached to the original solution of problems so selected as to afford applications of the principles taught in the class-room. These exercises are required in all the classes weekly or semi-monthly.

TEXT-BOOKS:

Ray's Algebra; Tappan's Geometry (Ray's series); Robinson's Trigonometry; Smith's Biot's Analytical Geometry, with Courtenay's Notes and lectures by the Professor; Courtenay's Calculus; and Comte's Philosophy of Mathematics.

The whole of the above course is requisite for the Degree of MASTER OF ARTS. The requisites for the Degree of BACHELOR OF ARTS or BACHELOR OF SCIENCE, are the subjects embraced in the Junior and Intermediate Classes, and so much of the Senior course as to include Differential and Integral Calculus.

SCHOOL OF APPLIED MATHEMATICS.

Professor ALLAN.

In this School there will be, for the present, four classes :

I. 1. Land and Engineering Surveying, with the theory and use of instruments, Navigation, Descriptive Geometry and Drawing.

2. Astronomy.

(The Surveying, Navigation, and Astronomy of this course are included among the requisites for the Degree of A. B.)

II. 1. Civil Engineering (continued), materials, masonry and stone cutting, including domes, groined and cloistered arches, &c., structures of wood, iron and stone, roads, canals, tunnels, &c.

(This course, with the entire preceding one, is included in the requisites for the Degree of B. S.)

2. Military Engineering.

III. Engineering, (completed), mathematical investigation of strength of materials, of bridges, of arches, &c., machinery, steam engine, &c.

IV. Physical and Mathematical Astronomy.

SCHOOL OF NATURAL PHILOSOPHY.

Professor McCULLOH.

In this School there are three classes :

I. GENERAL PHYSICS.

This class studies: 1. The Mechanics of Solids, Liquids, and Airs; 2. Acoustics; 3. Optics; 4. Heat and the Steam Engine; 5. Electricity, Magnetism, and the Electric Telegraph.

Those who desire to pursue this course advantageously must know Algebra, Geometry, Plane Trigonometry and the method of Coördinates.

II. ANALYTICAL PHYSICS.

This class will study: 1. Analytical Mechanics; 2. Molecular Mechanics, including Analytical Acoustics and Optics, and the undulatory theory of Light and Radiant Heat.

A knowledge of the Differential and Integral Calculus is necessary to enter this class.

III. APPLIED PHYSICS.

This class studies: 1. Industrial Mechanics, including the Principles of Mechanism, the manufacture of machinery, tentile fabrics, &c.; 2. Animal, wind, water, and steam power; 3. Heat and steam applied to the warming and ventilation of buildings and mines, to furnaces, &c.; 4. The steam engine applied to navigation, mining, and manufactures; 5. Electro-magnetism applied to clock-work, telegraphic and other machinery.

To pursue this course a student must also study that of General Physics, which may be done simultaneously. He should have studied the Differential and Integral Calculus and Descriptive Geometry sufficiently to be able to make industrial drawings.

For the Degree of A. M., the two full courses of General and Analytical Physics are required. For that of A. B., the course of General Physics only.

Candidates for the Degree of BACHELOR OF SCIENCE, and for the professional Diplomas of Civil and Mining Engineer, will study, in addition to the Course of General Physics, such parts of the courses of Analytical and Applied Physics, as shall be designated to them respectively.

TEXT-BOOKS:

Peck's Mechanics; Bartlett's Analytical Mechanics; Bartlett's Acoustics and Optics, and the chapter on the Wave Theory of Light in Avery's Mathematical Tracts.

SCHOOL OF CHEMISTRY.

Professor CAMPBELL.

There are two classes in this School, a *Junior* and a *Senior*. The studies are divided as follows:

JUNIOR CLASS.

1. CHEMICAL PHYSICS—Including a discussion of those physical properties and forces which directly control or modify chemical action; the theories and laws of Light, Heat, and Electricity, with the relation of these agencies to each other, and to the science of Chemistry.

2. INORGANIC CHEMISTRY—In which are discussed the use of chemical symbols and nomenclature; the laws of chemical affinity; electrochemical decomposition; the atomic theory, and the theory of volumes; all of which topics are illustrated by giving, in connection with them, the history and properties of the prominent metalloids, and the compounds they form with one another.

The chemistry of the metals and their compounds is then given; the relation of Chemistry to Mineralogy, and the general principles of inorganic analysis.

3. ORGANIC CHEMISTRY—Involving a discussion of the composition and properties of the proximate constituents of plants and animals; the changes produced by fermentation, and by light, heat, and chemical reagents; the theory of compound radicals; the properties of vegetable acids and alkaloids, and the principles and processes of organic analysis.

4. PHYSIOLOGICAL CHEMISTRY—Under which is noticed the connection of vitality with chemical action in both plants and animals, as illustrated in growth, nutrition, and respiration.

5. An outline history of the origin and gradual development of chemical science.

This class meets the Professor in the Laboratory on six days of every week. Three days are devoted to lectures, illustrated by elaborate experiments; the other three days to recitations on the lectures and text-book. At each recitation, some members of the class are required to repeat experiments previously given in connection with the lectures. The Laboratory is also accessible at convenient hours for students to practise manipulations privately.

Solutions of scientific problems, with written exercises and essays on the subjects of study, are assigned frequently throughout the session.

Fownes' Chemistry is used as a text-book, with references to Graham, Regnault, Liebig, Gregory and others.

NOTE.—Students applying for admission to the Junior Class must be familiar with Algebra and Geometry.

SENIOR CLASS.

The studies of this class are—

1. MINERALOGY—Embracing the physical and chemical properties of the most important minerals, with the modes of testing and analyzing. The subject will be illustrated by a large cabinet of mineral specimens, and by the application of chemical and blow-pipe manipulations.

2. GEOLOGY—Which will be taught by lectures, with the use of a text-book, and illustrated by appropriate maps and cuts, and by occasional excursions of the class to convenient localities for observation, among the hills and mountains in the neighborhood of the College.

SCHOOL OF APPLIED CHEMISTRY.

In this School are taught Metallurgy and the application of the principles of chemistry to Agriculture, Mining, Manufacturing, and the mechanic Arts, together with vegetable and animal Physiology.

Until a professor shall be appointed for this School, the subjects embraced in it will be distributed among the professors in the other scientific schools.

CIVIL AND MINING ENGINEERING.

The Scientific Schools are so arranged as to embrace full courses in Civil and Mining Engineering.

The course of Civil Engineering will include :

Pure Mathematics; Analytical and Applied Mechanics; Physics; Chemistry; Geology; Descriptive Geometry and Drawing; Surveying; Geodesy; Astronomy; the Construction of Roads, Bridges, and Canals; Machinery; Carpentry; Masonry; Architecture; and the French and English Languages.

The course of Mining Engineering will include :

Pure Mathematics; Descriptive Geometry and Drawing; Mechanics; Physics; Theoretical, Applied, and Analytical Chemistry; Metallurgy; Mineralogy and Geology; the construction of furnaces, buildings, &c.; the exploration and working of mines; and the French, English, and German Languages.

It may be observed that any student who may come prepared in the elementary pure mathematics of the first two years, and possessing a proper knowledge of the English Language, can complete the studies required for either of these professional courses in two years.

Diplomas will be awarded to students in these courses who pass a satisfactory examination, and submit such plans, drawings, specifications, calculations, &c., on some subject or subjects, as may prove their ability to take charge of and direct professional work.

SCHOOL OF LAW AND EQUITY.

Professor BROCKENBROUGH.

This school was extensively known as the "Lexington Law School" for a number of years prior to the late war, when its exercises were interrupted. Twelve months since, under the conduct of its founder, the present Professor, it was connected with this College, and has been in successful operation during the present session.

The next session of this school will commence on the first Monday in October next, and terminate with the regular college session, at the end of June 1868. There will be a Junior and a Senior course, in each of which three recitations per week will be held during the entire term. These recitations will average three hours per day, and the subjects assigned for each will be discussed orally by the Professor, with all requisite fullness. It will be his duty to illustrate the elementary principles involved by a practical analysis of leading cases, both English and American. The Common and Statute Law of Virginia, and her system of equity and jurisprudence will be subjects of special consideration. It will be his desire to generate in the mind of the student a taste for the study of law, as an enlarged and rational system of jurisprudence, and to imbue him with the philosophical spirit that pervades it throughout all its extensive ramifications. Taught to regard law as a noble and refined science, and not merely as a crude collection of arbitrary precedents, the student will proceed to the investigation of its abstruse and subtle principles, with a zest that will relieve the study of all its drudgery.

As the session approaches its close, a Moot Court will be organized, in which a variety of legal questions will be discussed, and cases will, regularly, be matured for trial, from the emanation of the original process to the production of an issue. The Professor will generally preside at the sessions of this Court, and after argument, proceed to discuss each case argued at the bar, assigning at large the reasons for the conclusions arrived at. Occasionally the Court will be composed of members of the class, who will be expected to deliver opinions either orally or in writing.

Special attention will be given to that extensive class of questions affecting contracts entered into *flagrante bello*, payable in money generally, or, expressly or by implication, in the then existing currency of the country; and to the true principle of adjustment of the rights and liabilities of the parties to such contracts. Questions of this character, infinitely various in the forms of their presentation, will possess, for years to come, a commanding and paramount interest.

Students may attend a partial course of Law, and at the same time pursue studies in the regular Collegiate course.

JUNIOR COURSE.

Stephen's Commentaries, or (if this work be out of print) Sharswood's Blackstone; Stephen on Pleading; Greenleaf on Evidence, 1st volume.

The Code of Virginia (1860), and Matthews' Digest of the Statute Laws of Virginia, will be used as books of reference, indifferently in the Senior and Junior courses.

SENIOR COURSE.

Lomax's Digest of the Law of Real Property; Kent's Commentaries; Smith's Mercantile Law; Adams' Equity.

TERMS:

PAYABLE IN ADVANCE.

The Tuition for the School is	\$100 00
For the Junior Course alone.....	60 00

EXAMINATIONS.

These are

1. Occasional, taking place at any period during the session, when the Professor in any school desires to review some branch of his subject just completed.

2. The General Examinations, Intermediate and Final, held, the former near the middle, and the latter near the close of the session.

3. The Special Examinations for Diplomas or Certificates of Proficiency, held near the close of the session.

These Examinations are partly written and partly oral, and are conducted by the Professor of the School in the presence of the President and a Committee of the Faculty. A Committee of the Trustees is also appointed to attend the regular Examinations, Intermediate and Final. No Diploma or Certificate of any kind is conferred, except after thorough and satisfactory examination upon the prescribed subjects.

DIPLOMAS AND CERTIFICATES.

1. As evidence of *satisfactory* attainments in any School, upon the completion of a prescribed course of study therein, a CERTIFICATE OF PROFICIENCY will be conferred, with the title of PROFICIENT in that School.

2. As evidence of *distinguished* attainments in any School, upon the completion of the entire course of study therein, a DIPLOMA will be conferred, with the title of GRADUATE in that School.

3. As evidence of distinguished attainments in the scientific and professional studies requisite for Civil Engineering, or for Mining Engineering, a DIPLOMA will be conferred, with the professional title of CIVIL ENGINEER, or of MINING ENGINEER.

4. Upon students who complete with distinction the prescribed course in any single class, yet are not entitled to a Diploma or Certificate of Proficiency in the School, CERTIFICATES OF DISTINCTION will be conferred.

No student is permitted to receive a Certificate of Proficiency in any School, who does not give evidence of possessing such attainments in the English Language as are necessary for its correct practical use.

DEGREES.

I. BACHELOR OF SCIENCE, (B. S.) The requisites for this Degree are *Certificates of Proficiency* in ENGLISH, FRENCH, MATHEMATICS, APPLIED MATHEMATICS, CHEMISTRY and APPLIED CHEMISTRY, (including MINERALOGY and GEOLOGY), NATURAL PHILOSOPHY, and a partial course of MORAL PHILOSOPHY; and a suitable Disquisition on some subject of Science, which, if required by the Faculty, shall be read at the Public Commencement.

II. BACHELOR OF ARTS, (B. A.) The requisites for this Degree are *Certificates of Proficiency* in LATIN, GREEK, ENGLISH, MORAL PHILOSOPHY, HISTORY, MATHEMATICS, and a partial course of CHEMISTRY, NATURAL PHILOSOPHY, and APPLIED MATHEMATICS; and a suitable Essay or Oration, which, if required by the Faculty, shall be read or delivered at the Public Commencement.

NOTE.—The course prescribed in each School for the above degrees, will be found by reference to the several Schools preceding.

III. MASTER OF ARTS, (M. A.) To attain this Degree, the highest literary honor conferred by the College, it is necessary to obtain *Diplomas* in LATIN, GREEK, TWO MODERN LANGUAGES, (including FRENCH,) ENGLISH, MORAL PHILOSOPHY, HISTORY and LITERATURE, MATHEMATICS, CHEMISTRY and NATURAL PHILOSOPHY; to pass a satisfactory Review Examination, embracing all the subjects of the entire course; and to furnish a suitable Essay or Oration, which, if required by the Faculty, shall be read or delivered at the Public Commencement.

IV. BACHELOR OF LAW, (B. L.) This degree will be conferred on graduates in the School of LAW AND EQUITY.

ADMISSION.

Applicants for admission, who have been students in other incorporated schools, must produce evidence of having left such school in good standing.

Unless prepared to begin the regular course, it is earnestly requested that no student shall be sent, under fifteen years of age.

COURSE OF STUDY.

The course of study is *elective*, each student being allowed to pursue such studies as his parent or guardian may select, if found prepared. But each student is required to attend at least eighteen lectures a week, or their equivalent in the judgment of the Faculty; and no student is allowed to leave any School without permission of the Faculty.

Where in any School there are several classes, students are assigned to their classes at the beginning of the session, according to their qualifications, so far as these can be ascertained. At the end of the first month all the classes are reorganized, as may be found necessary, and a permanent classification established. A student will, however, be liable at any time to a transfer to a lower class in the School, when it is deemed necessary by the Professor.

While the course of study is elective, students will yet receive the advice of the President and Faculty with reference to the choice and arrangement of their studies, according to the circumstances of each particular case. For general guidance, however, it is recommended that for the first session of each student, attention be given to the more fundamental studies of English, Mathematics, and Latin and Greek; or when these are not studied, Modern Languages; and that other studies be postponed. By a proper arrangement of studies following this principle, the entire course of study requisite for the Baccalaureate Degrees can be completed in the time usually required for a Collegiate Course, or in less time, if the student can enter well advanced.

PLAN OF INSTRUCTION.

The mode of instruction is by recitations from text-books and by lectures. In the less advanced classes, instruction is conducted chiefly by text-books. In the more advanced, after the student has acquired a habit of attention, lectures form a more prominent feature.

The Junior and Preparatory classes are divided into sections of moderate size, with a view to insure the more frequent examination of each student. This division of a class into sections is based, as far as practicable, upon the relative standing of its members.

GOVERNMENT.

The government of the College is administered by the President and Faculty, in accordance with a Code of Laws enacted by the Board of Trustees. The President devotes himself exclusively to the duties of his office, occupying a room in the College buildings, to which the students have at all times free access. He receives weekly reports of the standing and deportment of each student, visits from time to time the several classrooms, and attends all examinations; and is thus enabled to judge of the diligence, punctuality, and general conduct of the student.

Students receive the admonition and counsel of the President and Faculty before being subjected to any penalty, except in case of flagrant offences. Those who are habitually neglectful of their duties, or who do not regularly attend their lectures, will be required to withdraw from College.

REPORTS TO PARENTS AND GUARDIANS.

A statement of the standing and deportment of the students in their several classes, is made out weekly and submitted to the President. Copies of these reports are publicly posted for the inspection of the students. At the end of every month, a circular is made up from these weekly reports, and sent to parents and guardians, showing the absolute and relative standing of each student in his several classes, and also his punctuality in attending to all college duties.

RELIGIOUS AND MORAL CULTURE.

Religious services are held every morning in the College Chapel, by the various clergymen of Lexington, in rotation.

The students are required to attend these exercises, and must also attend the church of their choice at least once on Sunday. Opportunities are also afforded for attending Bible classes every Sunday.

LIBRARY.

Valuable additions have been made to the library from several sources, since the close of the war. Conspicuous among these is a large and valuable contribution of scientific and literary works, made by RATHMELL WILSON, Esq., of Philadelphia; also a liberal donation of foreign classical and mathematical works,

from C. B. RICHARDSON, publisher, New York. Arrangements exist by which the number of books is regularly increased, year by year. Students have free access to the library.

APPARATUS AND CABINET.

The philosophical and chemical apparatus has been already so far restored as to meet the immediate wants of the scientific departments, and arrangements have been made by which large accessions will soon be secured.

The cabinet of minerals contains a large variety of specimens suitable for illustrating the sciences of Mineralogy and Geology. It is hoped that the friends of the Institution will continue to send donations of the finer and rarer kinds of specimens, until the cabinet is restored to its former high degree of perfection.

LITERARY SOCIETIES.

Two literary associations have been in successful operation for nearly sixty years; one called THE GRAHAM PHILANTHROPIC SOCIETY, organized in 1809; the other, THE WASHINGTON LITERARY SOCIETY, organized in 1812. These societies meet once a week for debate, declamation, reading of original essays, and the transaction of business. Each of these associations has its hall and library room, and their two libraries contained, before the war, an aggregate of about four thousand volumes. To repair the losses sustained by these libraries, a fund has lately been collected by kind friends in Louisville, Kentucky, which will go far towards restoring them to their former condition.

The influence of these societies in developing capacity for public speaking, has always been very marked. They have been uniformly conducted with dignity and energy, and are looked upon as of great value in promoting good morals, as well as good taste and liberal culture.

SOCIETY OF ALUMNI.

The Alumni of the College have had a Society in successful operation for many years. Its annual meetings are held on Commencement day. The following is its present organization:

COL. S. McD. REID, *President.*

JACOB FULLER, ESQ., *Secretary and Treasurer.*

Executive Committee.

PROF. J. L. CAMPBELL, *Chairman.*

COL. WM. T. POAGUE,
REV. W. H. RUFFNER,

CAPT. C. P. ESTILL,
DAVID E. MOORE, JR., ESQ.

COMMENCEMENT EXERCISES.

These take place at the close of the session. On this occasion, diplomas and certificates are publicly awarded by the President; addresses are delivered by graduates, and by orators selected by the Literary Societies and by the Society of Alumni.

LENGTH OF SESSION.

The session opens on the third Thursday in September and continues without intermission until the third Thursday in June.

The second half session begins on the 1st of February. Students entering at or after that time are charged only half the regular fees.

EXPENSES.

Tuition	\$60 00
Room rent, matriculation fee, servant's attendance, use of library, &c.....	40 00
Extra fee for one Modern Language	20 00
“ “ for two or more.....	30 00

All the above fees are to be paid in advance.

Board and lodging, including fuel, can be had in the best families at from \$20 to \$25 per month; board, for meals alone, from \$17 to \$20.

The above expenses, exclusive of clothing and books, need not exceed \$350.

Students can lodge in the College buildings, furnishing their own rooms, and board in the town; or lodge and board in private families, in town or in the vicinity.

Ample arrangements are made for the accommodation of students.

As the lavish expenditure of money leads to many evils, parents are urged to limit their sons in their allowance of pocket money. To secure this end, it is recommended that parents direct their sons to deposit their funds with the Treasurer, who is authorized to receive them.

SCHOLARSHIPS, SPECIAL PRIVILEGES, &c.

By enactment of the Board of Trustees, "a credit for the College fees is extended to such meritorious young men, seeking the advantage of the Institution, as are unable to pay the same, and their bond taken, payable in not less than two nor more than six years from the probable termination of their collegiate course."

By similar enactment, the following classes of Scholarships have been established:

I. <i>Life Scholarships</i> , costing.....	\$1,000
II. <i>Family Scholarships</i> , costing	1,000
III. <i>Limited Scholarships</i> , costing.....	500

The first entitles the holder to nominate one student annually during his natural life; the second entitles the holder, or his legal representative, to nominate all of his sons as students; and the third entitles the holder, or his legal representative, to nominate one student annually for the term of ten years.

Students thus nominated shall enjoy the instruction of the College without charge for *tuition*, provided they have the qualifications required for admission. Such students will be subject to all the rules and regulations of the College.

Upon the payment to the Treasurer of the price of the above Scholarships, certificates, reciting the terms thereof will be issued, signed by the Rector and countersigned by the Secretary, and sealed with the College seal.

These certificates are not transferable.

Students from remote points in the South, who wish to take advantage of the healthiness of the locality, can obtain boarding in Lexington or the vicinity during the summer months, and prosecute their studies under the general direction of the Faculty.

All the text-books used in the College can be bought in Lexington, at the usual retail prices.

Lexington can be reached by stage from Staunton, on the Virginia Central Railroad, and from Bonsack's, on the Virginia and Tennessee Railroad, or by packet from Lynchburg.
